1. Abstract

The Flight Status Tracker is a web application that helps users check live flight information easily. Users can search for a flight using the flight number and view details such as departure time, arrival time, gate number, delays, and current flight status. This helps passengers stay updated and avoid confusion caused by schedule changes.

The project is developed using HTML, CSS, JavaScript, React.js, Node.js, Express.js, and REST APIs. It includes features like live updates, notification alerts, airline filtering, flight history, and a mobile-friendly design. An admin panel is also provided to manage flight details and updates.

The main goal of this project is to provide fast, accurate, and user-friendly flight tracking while helping students learn web development, API integration, and real-time data handling.

2. Module Mapping

Module Name	Assigned Roll Number(s)	Signature
Login & User Authentication, Live Flight Status Dashboard, Notification & Alert System, Flight History Log, Admin Panel.	2520030083	
Flight Search Module, Flight Delay & Gate Updates, Airline Filter Module, Responsive UI Design, API Integration & Testing	2520030487	

Koneru Lakshmaiah Education Foundation

(Deemed to be University estd. u/s. 3 of the UGC Act, 1956)

Off-Campus: Bachupally-Gandimaisamma Road, Bowrampet, Hyderabad, Telangana - 500 043.

Phone No: 7815926816, www.klh.edu.in

3. Module Details

Kompelli Saanvi(2520030083):

Login & User Authentication Module

Live Flight Status Dashboard

Notification & Alert System

Somisetty Ketana Sindhu(2520030487):

Flight Search Module

API Integration & Testing

Responsive UI Design

4. Frameworks / Platforms / Software Used

- HTML5 for page structure
- CSS3 for styling and layout
- JavaScript (ES6+) for interactivity
- React.js for building reusable UI components
- Node.js and Express.js for backend support and API handling
- REST APIs for fetching live flight data
- Axios for API communication
- React Router for page navigation
- Bootstrap or Tailwind CSS for responsive design
- Local Storage for temporary data storage
- Postman for API testing
- MySQL (optional) for storing user and flight data
